- Derek McColl** received his B.Sc. (Eng) degree in mathematics and engineering and M.A.Sc. degree in mechanical engineering from Queen's University, Kingston, Canada in 2007 and 2009 respectively. Currently he is a Ph.D. candidate in the Autonomous Systems and Biomechanics Laboratory in the Department of Mechanical and Industrial Engineering at the University of Toronto, Toronto Canada. His research interests include robotics, mechatronics, human-robot interaction and affect recognition.
- Goldie Nejat** received the B.A.Sc. and Ph.D. degrees in mechanical engineering from the University of Toronto, Toronto, Canada, in 2001 and 2005, respectively. She is currently an Associate Professor in the Department of Mechanical and Industrial Engineering at the University of Toronto, where she is also the Director of the Autonomous Systems and Biomechanics Laboratory. In addition, she is the Director of the Robotics and Mechatronics Institute at the university and an Adjunct Scientist at the Toronto Rehabilitation Institute. Her current research interests include the development of intelligent service and assistive robots for a number of applications including those in the healthcare, search and rescue, manufacturing and exploration/surveillance fields. One main aspect of her research is to develop and integrate intelligent socially assistive robots for assistive human-robot interactions (HRI) in healthcare facilities and private homes.
